

Loneliness after the fire and the hope of regeneration (reforestation)

Four trees are still standing alone and burned, after the fires in the summer of 2023 in the forest of Parnitha. This is the scenery that visitors encounter. Against the background of the city of Athens and the blue sky, the once “green lung” of Attica, stands alone and burnt. He hopes for human intervention, since it caused the disaster. He hopes for its regeneration and reforestation, so that it can regain its old beauty and vitality. We, the students of the 1st Special Primary School of Acharnon, hope for the same, so that the forest of Parnitha remains this vital “lung”. In a city where the exhaust gas suffocates us, we are not allowed to “burn” our breath.

Students of 1st Special Primary School of Acharnon
